

SEO Audit Report

[humbl.design.io](https://humbl.design)

41/100

Overall SEO Health Score

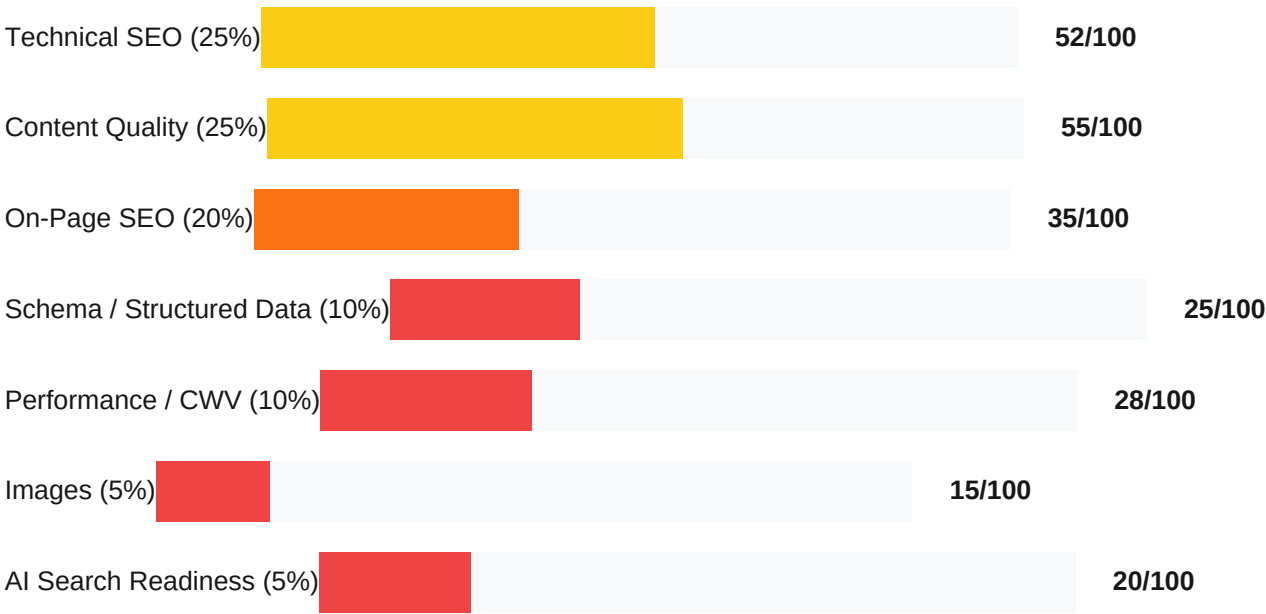

Date: February 21, 2026

Business Type: Design Agency

Platform: Webflow | CDN: Cloudflare

15 issues found | 5 critical | 3 high | 4 medium | 3 low

Score Breakdown

Scoring methodology: Weighted aggregate across 7 categories. Each category scored 0-100 based on industry best practices and Google's published ranking factors. Weights reflect relative SEO importance.

What's Working Well

- + Strong blog content: 14 published posts with good depth (top post: 4,440 words)
- + Good publishing cadence with regular content updates
- + Cloudflare CDN with HSTS headers, edge caching, and compression
- + SSL/HTTPS properly configured across the site
- + Clean, readable URL structure from Webflow

Prioritized Fix List

Fixes are ordered by impact. Completing items 1-8 is projected to raise the score from 41 to approximately 82/100.

1 **CRITICAL** Fix www to non-www Redirect

Impact: Both humbl.design.io and www.humbl.design.io serve identical content. Google indexes both, splitting all ranking authority in half.

Fix: - Go to Cloudflare dashboard > Page Rules (or Redirect Rules)

- Create rule: www.humbl.design.io/* redirects 301 to https://humbl.design.io/\$1
- Alternatively, configure in Webflow Hosting > Custom Domains
- Verify with: curl -I https://www.humbl.design.io (should return 301)

Est. Score Impact: +8 points

2 **CRITICAL** Add Canonical Tags to All Pages

Impact: No canonical tags exist on any page. Search engines cannot determine the preferred URL version, compounding the duplicate content problem.

Fix: - In Webflow: Settings > Custom Code > Head Code, add self-referencing canonicals

- Per page: <link rel="canonical" href="https://humbl.design.io/[slug]">
- For CMS pages, use Webflow's dynamic embed with the page URL field
- Verify in browser DevTools: search for 'canonical' in page source

Est. Score Impact: +6 points

3 **CRITICAL** Fix JSON-LD Schema Syntax Errors

Impact: Google cannot parse your Organization structured data. Two bugs: trailing comma in sameAs array and foundingDate typo '20021' instead of '2021'.

Fix: - Go to Webflow: Settings > Custom Code > Head Code

- Find the existing <script type="application/ld+json"> block
- Remove the trailing comma after the last sameAs URL
- Change foundingDate from '20021' to '2021'
- Validate at: https://search.google.com/test/rich-results

Est. Score Impact: +5 points

4 **CRITICAL** Add Width/Height to All 128 Images

Impact: Zero images have dimension attributes. This causes massive Cumulative Layout Shift (CLS) as the page jumps during image loading.

Fix: - In Webflow Designer, select each image element

- Set explicit width and height in the element settings panel
- For CMS images, configure the image field's default dimensions
- Priority: fix hero images and above-fold images first

Est. Score Impact: +5 points

5 **CRITICAL** Defer 7 Render-Blocking Scripts (686KB)

Impact: 7 scripts block first paint, directly hurting LCP (Largest Contentful Paint). Page cannot render until all 686KB of JS downloads and executes.

Fix: - Audit scripts in Webflow Custom Code for non-critical ones

- Add 'defer' attribute to analytics, chat widgets, and tracking scripts
- Move non-essential scripts from <head> to before </body>
- Keep only critical scripts (Webflow core) as render-blocking

Est. Score Impact: +4 points

6 **HIGH** Expand Homepage Title Tag (Currently 12 chars)

Impact: Title is just 'Humbl Design' - wastes the most valuable on-page SEO signal. Google uses title as primary ranking input.

Fix: - In Webflow: Pages > Home > SEO Settings > Title Tag

- Expand to 50-60 characters with target keywords
- Example: 'Humbl Design | Brand & Web Design Agency in [City]'
- Do the same for all other pages with thin titles

Est. Score Impact: +4 points

7 **HIGH** Replace 4 Lorem Ipsum Instances in FAQ

Impact: Placeholder text visible to users and search engines. Signals unfinished, low-quality content to both humans and crawlers.

Fix: - Search FAQ section for all Lorem ipsum text

- Replace each with real, helpful answers (100+ words each)
- Use natural language that matches how users ask questions
- Consider adding FAQ schema markup after fixing content

Est. Score Impact: +4 points

8 HIGH Compress Images: Convert to WebP (13.4MB total)

Impact: 13.4MB of images (mostly PNGs) is catastrophic for mobile. Most images can be 60-80% smaller in WebP format without visible quality loss.

- Fix:**
- Export images from Webflow or source files
 - Convert to WebP using squoosh.app or similar tool
 - Target: hero images under 200KB, thumbnails under 50KB
 - Re-upload compressed versions to Webflow Assets
 - Add loading='lazy' to all below-fold images

Est. Score Impact: +5 points

9 MEDIUM Add Missing Schema Types (Service, BlogPosting)

Impact: Missing rich result opportunities. Service schema helps Google understand offerings; BlogPosting schema enables article rich results.

- Fix:**
- Add Service schema for each service page (design, branding, web dev)
 - Add BlogPosting schema to blog post template in Webflow CMS
 - Add Person schema for team/founder pages
 - Consider AggregateRating schema if you have testimonials

Est. Score Impact: +3 points

10 MEDIUM Write Meta Descriptions for All Pages

Impact: Without meta descriptions, Google auto-generates snippets that may not be compelling or relevant.

- Fix:**
- In Webflow: Pages > [Each Page] > SEO Settings > Meta Description
 - Write 150-160 characters per page with clear CTAs
 - Include primary keyword naturally in each description
 - For CMS pages, use Webflow's dynamic meta description field

Est. Score Impact: +3 points

11 MEDIUM Fix Sitemap: Add lastmod Dates

Impact: Without lastmod, Google cannot prioritize crawling updated pages. Wastes crawl budget on stale content.

- Fix:**
- Webflow auto-generates sitemaps at /sitemap.xml
 - Ensure CMS items have 'Updated' date fields populated
 - Verify the missing color guidelines post is published (not draft)
 - Consider a third-party sitemap tool if Webflow's is insufficient

Est. Score Impact: +2 points

12 MEDIUM Compress/Optimize Video Content (9.8MB)

Impact: Nearly 10MB of video on the homepage adds significant load time, especially on mobile connections.

Fix: - Compress videos using HandBrake or FFmpeg (target 2-3MB)

- Use lower resolution for mobile (720p max)
- Implement poster images so video doesn't load until played
- Consider hosting on YouTube/Vimeo with embedded player to offload bandwidth

Est. Score Impact: +2 points

13 LOW Add AI Crawler Directives

Impact: No control over how AI systems (GPTBot, ClaudeBot, PerplexityBot) access and use your content.

Fix: - Add AI crawler rules to robots.txt (allow or disallow as desired)

- Create an llms.txt file describing your business for AI systems
- Monitor AI search visibility in Google Search Console

Est. Score Impact: +1 point

14 LOW Add Open Graph and Twitter Card Meta Tags

Impact: Improves appearance when pages are shared on social media. Minor indirect SEO benefit through increased engagement.

Fix: - Add og:title, og:description, og:image to each page

- Add twitter:card, twitter:title, twitter:image tags
- Use Webflow's built-in Open Graph settings per page

Est. Score Impact: +1 point

15 LOW Implement Breadcrumb Navigation + Schema

Impact: Helps users and search engines understand site hierarchy. Enables breadcrumb rich results in SERPs.

Fix: - Add visual breadcrumbs to interior pages in Webflow

- Add BreadcrumbList schema markup
- Example: Home > Services > Web Design

Est. Score Impact: +1 point

Projected Score After Fixes

Projections are estimates based on the relative weight of each category. Actual improvements depend on competitive landscape, domain authority, and Google's crawl/index timing. Expect 2-6 weeks for changes to fully reflect in rankings.

Quick Reference Table

#	Priority	Fix	Impact	Effort
1	CRIT	Fix www to non-www redirect	+8 pts	Easy
2	CRIT	Add canonical tags to all pages	+6 pts	Easy
3	CRIT	Fix JSON-LD schema syntax errors	+5 pts	Easy
4	CRIT	Add width/height to 128 images	+5 pts	Medium
5	CRIT	Defer 7 render-blocking scripts	+4 pts	Medium
6	HIGH	Expand homepage title tag	+4 pts	Easy
7	HIGH	Replace Lorem ipsum in FAQ	+4 pts	Easy
8	HIGH	Convert images to WebP + compress	+5 pts	Medium
9	MED	Add Service/BlogPosting schema	+3 pts	Medium
10	MED	Write meta descriptions	+3 pts	Easy
11	MED	Fix sitemap lastmod dates	+2 pts	Easy
12	MED	Compress video content	+2 pts	Medium
13	LOW	Add AI crawler directives	+1 pt	Easy
14	LOW	Add OG / Twitter Card tags	+1 pt	Easy
15	LOW	Add breadcrumb navigation	+1 pt	Medium
